

“ a QC method tailored for **Innovators** ”

Master Product

Measurement

Results

Control your product sound quality

Make sure that your product's sound satisfies your market's expectation

Detection of defective products

Defective products create irregular sound and vibration. Let our reliable system spot it for you.

Quick and efficient QC method

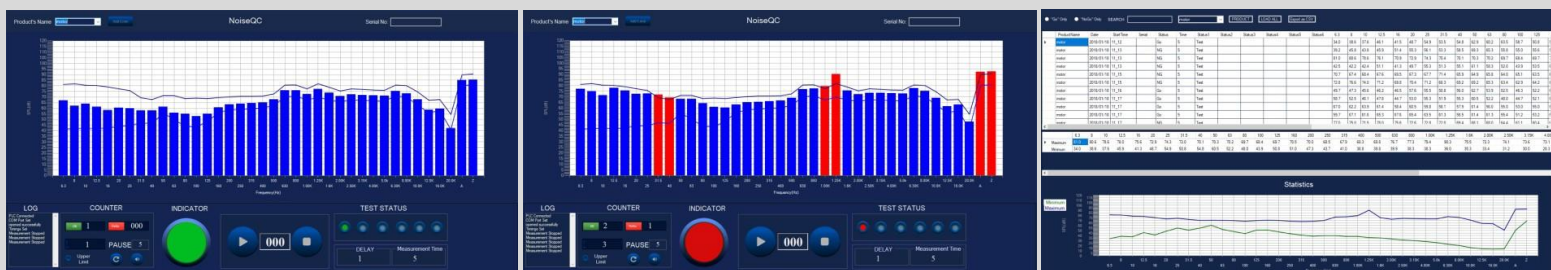

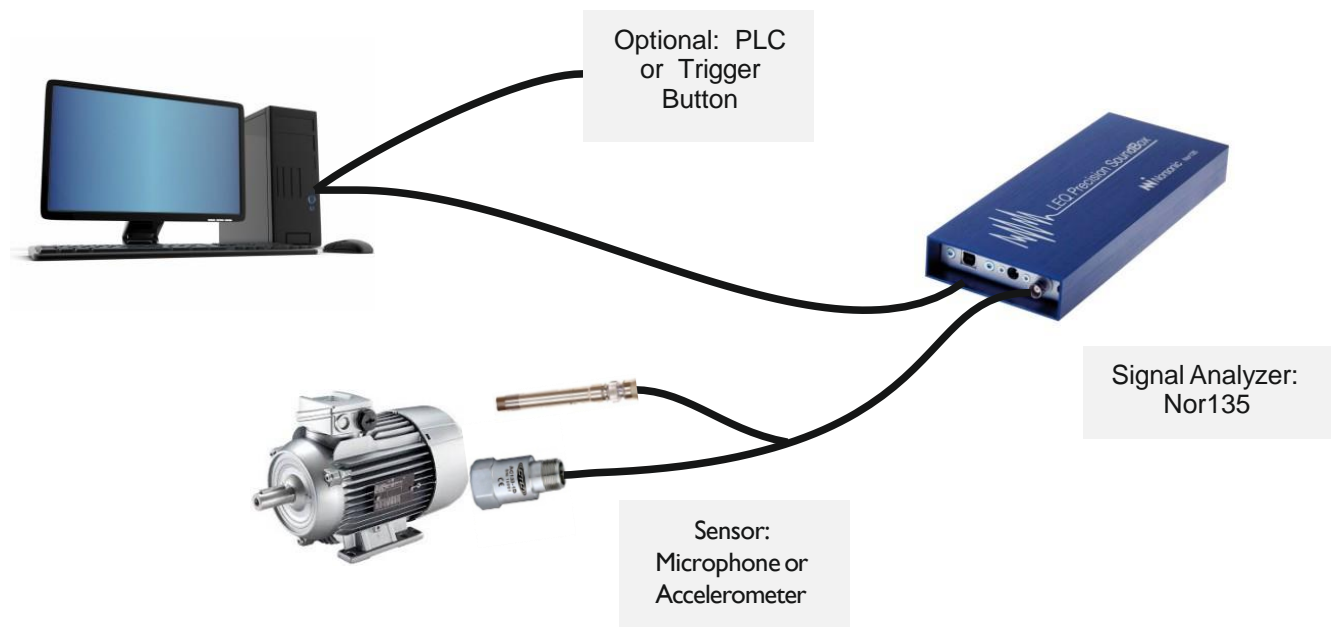

Once it's up and running, do your QC within seconds.

Wide range of applications

Motors, fans, electrical rotating parts,
Pretty much any products that creates noise and vibration

HOW DO WE DO IT?

Set up your hardware and communication

- Measure your measured products and compare with the limit
- The limits are set by measuring the sound or vibration of your golden samples
- Determine whether the measured unit is OK or NG within seconds
- Report and analyze the results

NEW FEATURES

- New User Interface
- PLC Communication
- Multiple testing status e.g. different RPMs
